General Dentist

AGD CODE:

610

SAC:

Straightforward

TYPE:

Lecture

CE HOURS:

2.0 hours

SPEAKER:

Jared Batson - Regional Sales Director

Amber Brooks - Senior Territory Manager

Digital dentistry is changing the way the dental team interacts with one another and plans treatment. Incorporation of digital technology for restorative solutions can help deliver natural-looking, esthetic results for patients. Connectivity between current intraoral scanners allows the restorative doctor to take a digital impression, make any occlusal modifications chairside, print a provisional and send the file to the laboratory to design the definitive restoration. This program will review recent advances in digital technology; the increasing importance of the partnership between the dentist and the lab; the differences between various materials used; surgical planning software for implant placement and restoration; 3D printer options; and the many benefits available to the treatment team when using digital dentistry solutions.

OBJECTIVES

- Recognize how to incorporate recent technological advances as part of the treatment plan.
- Understand how digital impressions can help create an accurate definitive restoration.
- Understand the materials and processes available for digital restorations.
- Identify cases where guided surgery planning would be helpful for implant placement.
- Discuss the scientific evidence for the applications of digital technology.
